WHAT IS SPRAVATO?

SPRAVATO®, the only FDA-approved nasal spray for adults with treatment-resistant depression, reduces depression symptoms. SPRAVATO® can be taken with or without an oral antidepressant.

WHO IS IT FOR?

For adults who are struggling with persistent symptoms of depression or suicidal thoughts and have not had success with other anti-depressants after trying two or more medications.

HOW DOES SPRAVATO WORK?

Spravato (esketamine) works by helping the brain form new connections to lift mood quickly, especially when other depression treatments haven't worked. Spravato targets a brain chemical called glutamate, not serotonin or dopamine like most antidepressants.

WHAT ARE THE BENEFITS OF SPRAVATO?

SPRAVATO® has shown to reduce depressive symptoms and suicidal thoughts in adults with TRD, with some patients experiencing improvement within four weeks.
